What is a firefighter storage container?

Portable storage containers are ideal structures for fire departments to conduct firefighter training. Shipping containers are highly versatile and customizable, allowing fire departments to stack storage units on top of one another to create any number of unique building designs.

Can you use shipping containers to build custom firefighter training structures?

Here's a few benefits in using shipping containers to build custom firefighter training structures. Using shipping containers for firefighter training is probably the most cost-efficient option there is. Used shipping containers are low-cost to purchase and can be modified in any way the fire department sees fit.

What types of fire training can a shipping container support?

Most shipping containers can support various types of fire training, such as digital, gas-fueled, or carbonaceous fires. This can allow fire departments to train in a variety of different ways or skill-levels using the same shipping container structure.

What size shipping container for firefighter training?

Shipping containers for firefighter training are normally 40-foot containers, but you can also utilize 20-foot containers if you prefer a smaller structure. Many fire departments choose to stack and weld 40-foot containers on top of one another to create multi-story buildings with multiple corridors, rooms, and windows.

Design mobile or roll-off fire training containers that can be deployed to remote training areas or shared between fire departments.

With coast-to-coast service coverage and competitive wholesale pricing, we make it easy for government departments to obtain the right container at the right time.
