-----

Hydrogen storage tanks, essential for hydrogen vehicles and fuel cell electric vehicles, are designed as high-pressure containers with a barrel-shaped exterior.

We supply specific modules incorporating THERA technology at typical refueling station pressures, from 240 bar up to 1000 bar, to ensure a ...

In the sub-project Mukran of the BMBF-funded flagship project TransHyDE, spherical and nearly spherical-shaped (isotensoids with short cylindrical spacer) high-pressure ...

This storage solution enables safe intermediate storage and flexible transportation of self-produced green hydrogen. Our pressure vessels are available individually, in customized ...

We supply specific modules incorporating THERA technology at typical refueling station pressures, from 240 bar up to 1000 bar, to ensure a reliable transport of high-pressure ...

In this paper, storing compressed gaseous hydrogen is discussed based on three main types of storage: a storage vessel with its different types, geological storage, and other ...

Choosing the best technology for high-pressure gas storage is essential to ensuring safety, reliability, and long-term performance. The right ...

Our composite ground storage vessels deliver compact, efficient, and high-capacity gas storage. Ideal for hydrogen stations, ...

Our composite ground storage vessels deliver compact, efficient, and high-capacity gas storage. Ideal for

hydrogen stations, CNG facilities, and renewable energy sites.

Choosing the best technology for high-pressure gas storage is essential to ensuring safety, reliability, and long-term performance. The right equipment reduces risk, improves operational ...

All our hydrogen based products, e.g. high pressure composite hydrogen tanks, mobile filling station and hydrogen storage containers are all manufactured within the Netherlands.

With the COSMOS high-pressure system from heiserTEC, we offer a modular solution that is used worldwide in energy projects, research facilities, and industrial applications.

This storage solution enables safe intermediate storage and flexible transportation of self-produced green hydrogen. Our pressure vessels are ...

In the sub-project Mukran of the BMBF-funded flagship project TransHyDE, spherical and nearly spherical-shaped (isotensoids with ...

Our goal is to develop high-pressure-resistant tanks that offer an innovative solution that not only meets current standards but also fulfills future requirements.
