-----  
Is solar power a good investment in Spain?

Since he took power in 2018, energy developers have built solar parks, proved that power generation had attractive returns and pulled in capital from yield-hungry investors. In 2023 and 2024, Spain added more solar power capacity than any other European country except Germany, whose economy is more than twice its size.

How much energy does Barcelona use a year?

That is why Barcelona has a moderate energy consumption compared to other conurbations. The city currently consumes about 17,000 GWh/year, of which 370 (2.17%) is already produced with renewable energy (solar energy and miniwind turbines among others) and waste-to-energy.

Why is energy important in Barcelona?

That is the reason why the city promotes renewable energy and encourages improving the environmental quality of the urban environment, focusing on areas such as noise, lighting or air quality. Energy and the way it is planned in Barcelona is defined by two adjectives: dense and Mediterranean.

How to reduce energy consumption in Barcelona?

In order to reduce the overall consumption, the City Council ensures reducing Barcelona energy dependence from abroad, and encourages local generation, renewable energy and networking. That is, working towards energy self-sufficiency. The aim is to improve efficiency and reduce emissions of greenhouse gas and other pollutants having a local effect.
