What does Aurora's liquified natural gas deal mean for Chile?

The agreement with Abastible -- a market leader in liquified natural gas -- is Aurora's first step for a clean energy transition. Chile takes its renewable energy goals seriously, having already surpassed its 2030 targets for decarbonization, per Renewable Energy Magazine.

How will the Aurora project impact our energy supply?

Close to three-quarters of the nation's energy supply is currently derived from renewable sources. The Aurora project will only push those numbers even higher. As our global energy demand rises with population growth and the evolution of industries, transitioning to renewable energy is becoming increasingly essential.

How much energy does Aurora generate a year?

Construction is already underway at Aurora, which will generate approximately 600 GWh of renewable electricity per year, equivalent to the annual consumption of 200,000 Chilean households, contributing significantly to the country's decarbonization. The BESS units will begin delivery in Q4 2025.

Where is Sungrow's solar project located?

Its Aurora project, located in Chile's Tarapaca region, will also feature a 220-MWdc solar farm equipped with Sungrow's modular inverters. The BESS will support night-time solar energy delivery under a long-term power purchase agreement (PPA) with Chilean liquefied gas distributor Abastible.

The deal involves the supply of Sungrow's PowerTitan 2.0 liquid-cooled BESS and its MV Power Conversion Units for a 1 GWh ...

Multinational assurance and risk management provider DNV has helped renewable energy leader Zelestra secure close to \$300 million ...

The deal involves the supply of Sungrow's PowerTitan 2.0 liquid-cooled BESS and its MV Power Conversion

Units for a 1 GWh storage capacity project within the Aurora hybrid ...

Its Aurora project, located in Chile's Tarapaca region, will also feature a 220-MWdc solar farm equipped with Sungrow's modular ...

Zelestra, a global, multi-technology, customer-focused renewable energy company, has successfully achieved Financial Close of the Aurora project in Chile, through a ...

Located in the northern Chilean region of Tarapacá, the hybrid project will be co-located with 1GWh of battery energy storage system ...

The Aurora project combines battery storage and solar generation, featuring a 220 MW direct current solar plant also equipped with Sungrow's 1+X modular inverters. The installed capacity ...

Chile leads South America's renewables push, with solar and wind at 40% capacity. Battery storage tackles grid challenges, while green hydrogen ambitions position Chile as a global ...

Located in the northern Chilean region of Tarapacá, the hybrid project will be co-located with 1GWh of battery energy storage system (BESS). Financing of the Aurora solar ...

The Aurora project combines battery storage and solar generation, featuring a 220 MW direct current solar plant also equipped with Sungrow's 1+X ...

Zelestra ha asegurado un paquete de financiamiento por 282 millones de dólares para el proyecto Aurora, ubicado en la comuna de Pozo Almonte, región de Tarapacá. El ...

Latin America's ambitions for large-scale energy storage are moving from concept to construction with Zelestra's Aurora project, a 1 GWh hybrid solar-plus-storage plant now ...

Zelestra, a global, multi-technology, customer-focused renewable energy company, has successfully achieved Financial Close of ...

Multinational assurance and risk management provider DNV has helped renewable energy leader Zelestra secure close to \$300 million to channel towards the development of a ...

Construction is already underway at Aurora, which will generate approximately 600 GWh of renewable electricity per year, equivalent to the annual consumption of 200,000 ...

Its Aurora project, located in Chile's Tarapaca region, will also feature a 220-MWdc solar farm equipped with Sungrow's modular inverters. The BESS will support night ...
