The amount of renewable energy produced around the world is increasingly exceeding demand - particularly from wind and solar sources. This presents a significant ...

One analysis estimates that European power systems could save up to EUR4 billion (€3.5 billion) through the introduction of vehicle-to-grid (V2G) and other smart-charging ...

In this work, a novel energy storage system consisting of a hybrid storage system and an intelligent and bidirectional charging station ...

A new bidirectional charging trial on the Isle of Wight shows how electric vehicles can store excess renewable energy to power homes and the grid.

One analysis estimates that European power systems could save up to EUR4 billion (€3.5 billion) through the introduction of vehicle-to-grid (V2G) and other smart-charging schemes.

In this work, a novel energy storage system consisting of a hybrid storage system and an intelligent and bidirectional charging station was shown. The technical properties of the ...

State governments play an important role in the planning and implementation of electric vehicles (EV) and EV charging infrastructure. Specifically, the Infrastructure Investment and Jobs Act ...

Battery energy storage systems can enable EV charging in areas with limited power grid capacity and can also help reduce operating costs by reducing the peak power needed from the power ...

Therefore, this paper proposes a two-level approach for optimizing EV charging-swapping schemes alongside

scheduling MESSs to efficiently allocate solar energy generation ...

Abstract: With the popularity of electric vehicles (EVs) and the gradual maturity of the technology of bidirectional power transfer between EVs and the grid, EVs as a mobile ...

Battery energy storage systems can address the challenge of intermittent renewable energy. But innovative financial models are needed to encourage deployment.
