enabled an assessment of the current electrical energy production. The 2035 production estimate is based on the Energy Sector Development Projects (PDSEN) report

The goal was to reach an energy production capacity of 3000 MW by 2020, and later, 5000 MW by 2035, to overcome the energy deficit. This would meet the national economy and ...

On Friday 10 May, Cameroon's Minister of Energy, Gaston Essomba (far right in photo), officially launched the injection of the first 60 megawatts into the electricity distribution ...

The plant will be fully operational in 2024. Cameroon's installed electricity capacity is expected to increase in the coming months. This will be thanks to the gradual commissioning of the ...

According to Cameroon's Ministry of Water and Energy, both plants are technically ready to proceed, but their implementation remains conditional upon the National Hydrocarbons ...

Upon its final commissioning in 2025, Nachtigal will be the most powerful hydroelectric plant in Cameroon and will represent a significant asset for the country's sustainable development.

Cameroon plans to add 50,000 new electricity connections by the third quarter of 2026 under its results-based program (PforR), financed with CFA180 billion from the World Bank.

Cameroon's Nachtigal Hydro Power Company has commissioned a 60 MW turbine at the Nachtigal hydroelectric power project. The turbine is the first of seven units ...

Originally initiated by French utility giant EDF, the ambitious 420 MW Nachtigal hydropower project began
