---

China is about to switch on a satellite production complex that will reshape the balance of power in orbit, turning a once-remote stretch of tropical coastline into a high-volume assembly...

Companies like Space Solar are devoted to transforming the bold vision of space-based solar power into a tangible, revolutionary ...

China is about to switch on a satellite "super factory" able to produce 1,000 units annually - a major step in Beijing's race to build low Earth orbit constellations as part of its ...

Companies like Space Solar are devoted to transforming the bold vision of space-based solar power into a tangible, revolutionary energy source. In just over a decade, it plans ...

A major leap in satellite manufacturing is taking place in China, with the construction of Asia's largest satellite "super factory" in Hainan Province.

China is set to activate a satellite "super factory" capable of manufacturing 1,000 units per year - a significant advancement in Beijing's pursuit to develop low Earth orbit constellations, aiming ...

As the facility nears operation, it positions China to significantly increase its satellite production scale, supporting both national projects and commercial ventures alike.

Its intelligent factory in the eastern coastal city of Nantong has reached an annual production capacity of 100 to 150 medium-sized satellites.

The company has leveraged much of its existing advantages in robotic assembly, materials science, and

automated processes to build a production line that reduces cost and increases ...

A new era in space technology begins this month as the Wenchang International Aerospace City (WIAC) prepares to launch operations for Asia's largest satellite production ...

Chinese scientists have announced a plan to build an enormous, 0.6 mile (1 kilometer) wide solar power station in space that will beam continuous energy back to Earth ...
