-----

In an unusual merger of renewable energy and fossil fuels, solar energy is being tapped to power an existing oil refinery.

This study highlighted the use of CSP directly coupled to carbon capture and storage facility of a crude oil refinery as a potential pathway toward net-zero refineries.

As a professional service provider in the field of sheet metal processing, we focus on providing highly adaptable and reliable cabinet processing ...

The present study investigates the feasibility of solar hybrid system to generate steam in the oil refinery to maintain the temperature of heavy crude oil products before ...

Corrosion on PV modules will lead to a reduction in module power output and affect the entire output of your system. In this respect, ...

A perusal of the literature reveals that a review focused on corrosion mitigation in the refinery is scarce. So, a comprehensive and up-to-date review of corrosion mitigation in ...

This book addresses corrosion problems and their solutions at facilities in the oil refining and petrochemical industry, including cooling water and boiler feed water units.

The purpose of this study is to investigate the potential use of solar energy within an oil refinery to reduce its fossil fuel consumption and ...

Innovative anti-corrosion technology now enables the design of containers that prevent oxidation and material

degradation. Special protective coatings and the use of ...

As a professional service provider in the field of sheet metal processing, we focus on providing highly adaptable and reliable cabinet processing services for photovoltaic energy storage ...

There are several types of corrosion-resistant alloys commonly used in oil refining. Each type offers unique properties that make it suitable for specific applications.

Corrosion on PV modules will lead to a reduction in module power output and affect the entire output of your system. In this respect, advances in materials play an important ...

This book addresses corrosion problems and their solutions at facilities in the oil refining and petrochemical industry, including cooling water and boiler ...

Innovative anti-corrosion technology now enables the design of containers that prevent oxidation and material degradation. Special ...

The purpose of this study is to investigate the potential use of solar energy within an oil refinery to reduce its fossil fuel consumption and greenhouse gas emissions.
