The battery cabinet is equipped with narrow pallet jack or forklift access openings in the front and rear of the cabinet. Move the equipment into the desired location and set in place.

Draw a wiring schematic representing the cables connected between the battery cabinet's output terminal blocks and any external disconnect device, junction box and/or load/rectifier.

Verify that no current will flow when the battery is connected or disconnected by opening battery disconnects (if available) or adjusting the system to match battery voltage.

Route the ground wire (from the field kit) from the ground stud in one battery cabinet, under the lower battery tray and through the cabinet-to-cabinet cable access area in the side of the ...

Error - The battery cabinet encountered an Error condition that requires resetting of the BMS due to an over current condition or contactor stuck condition.

Install the main POS and NEG cables from the output circuit breaker to the correct battery posts on the designated battery units shown in the provided battery system schematic.

Allow adequate clearance around the battery cabinet for ventilation and maintenance. The front panel must be accessible and removable to allow easy access to internal batteries, internal ...

Battery cabinets that are not supplied with an incorporated DC output disconnect device must have an appropriate disconnect device provided external to the cabinet.

The BC16 battery cabinet is equipped with four casters, two swivel types in front and two rigid types in the back. Move the cabinet into the desired location and lock the front casters.

Current route of battery cabinet
