---

Distributed energy resources, or DER, are small-scale energy systems that power a nearby location. DER can be connected to electric grids or ...

Before we can figure out what this solar + storage system is, we need to understand the context it fits into: the grid. The electric grid is the generic term for the ...

To this end, NYSERDA is funding pilot projects, technical assistance, and resources that reduce the market and institutional challenges to the deployment of distributed energy storage in the ...

What are DERs? Distributed Energy Resources (DERs) are small, modular energy generation and storage technologies that provide electric capacity or energy where it is needed.

Clean energy and energy storage systems need to be connected to the distribution grid through a process known as interconnection. As the number of installations rapidly ...

NREL prints on paper that contains recycled content. This report was produced as part of the activities of the Distributed Generation Interconnection Collaborative (DGIC).

The academic definition of Distributed Energy Storage moves beyond simply describing it as storage located near consumption. Instead, it's crucial to designate DES as a ...

Dispatchable distributed energy storage can be used for grid control, reliability, and resiliency, thereby creating additional value for the consumer. Unlike distributed generation, the value of ...

Battery energy storage is a critical technology component to reducing our dependence on fossil fuels and building a low-carbon future. Without it, this change will be impossible. Microgrids, ...

Technologies that store electricity from other energy sources for use when needed. They can be installed alone (and charge from the grid) or be colocated with an on-site ...

Distributed energy resources, or DER, are small-scale energy systems that power a nearby location. DER can be connected to electric grids or isolated, with energy flowing only to ...

Before we can figure out what this solar + storage system is, we need to understand the context it fits into: the grid. The electric grid is ...
