With the global market projected to grow at 8.5% CAGR through 2030, hybrid systems combining flywheel storage and batteries may soon dominate renewable infrastructure.

While battery storage remains the dominant choice for long-term energy storage, flywheel systems are well-suited for applications requiring rapid energy release and frequent cycling.

A grid-scale flywheel energy storage system is able to respond to grid operator control signal in seconds and able to absorb the power fluctuation for as long as 15 minutes.
