What type of Inverter should I buy?

This equipment is ideal for installation in residential areas, is highly efficient, reliable and durable. Inverters with single-phase and three-phase alternation current output of 220 and 380 V are readily available in our online store. Three-phase models can be used in homes or industrial sites.

What is a solar inverter?

Inverters convert direct current (DC) electricity produced by solar panels into a sinusoidal alternating current (AC) of 220V, which is suitable for most electrical appliances. The assortment of inverters for solar systems on the market today is huge.

What are the different types of solar inverters?

The other popular type of inverter for solar panels is the central inverter. It functions similarly to a string solar inverter, but bigger and can handle several strings. They are used in commercial solar systems, where a lot of solar power has to be converted.

How much power does a solar inverter use?

The power of such an inverter can reach up to 8000 Watts. To determine the size of the required inverter, you need to calculate the total load of all devices in the power supply grid. To do this, measure the power of each device for 1 hour and summarize the obtained result. Hybrid inverters are most effective for solar systems.
