-----  
What temperature should a battery be kept at?

For optimal battery performance, the battery room temperature should be maintained at a constant 77°F. Temperatures below 77°F increase the battery's life but decrease its performance during heavy discharge. In room temperatures above 77°F, battery performance increases but its life decreases.

Does a battery room cover maintenance free or computer room type batteries?

It does not cover maintenance free or computer room type batteries and battery cabinets. Main keywords for this article are Battery Room Design Requirements, vented lead acid batteries, battery room safety requirements, Battery Room Ventilation, unit substations electrical. Batteries can be hazardous to both personnel and equipment.

Can a battery room be ventilated?

C.4.4 Ventilated rooms with battery charging power more than 2 kW Batteries exceeding charging power of 2 kW shall be installed in closed cabinets, containers or battery rooms forced ventilated to open deck area. Lead batteries up to 3 kW may be ventilated by natural means. Battery rooms shall be arranged according to C.3.

How should a battery room be located?

This will reduce the cost and exposure of the dc distribution system. The battery room shall be located in a way that provides access for lifting equipment to be used during initial installation and future maintenance operations. The location shall be as free from vibration as practical.

The battery room shall be located in a way that provides access for lifting equipment to be used during initial installation and future maintenance operations. The location shall be as free from ...
