What does the Icelandic Environment & Energy Agency do?

Icelandic Environment and Energy Agency is responsible for measuring and reporting Iceland's emissions of greenhouse gases and carbon uptake by afforestation and other means. Here you can see numbers and trends.

What happened to the Environment Agency of Iceland?

The Environment Agency of Iceland was dissolved on December 31, 2024. On January 1, 2025, the Icelandic Environment and Energy Agency and the Nature Conservation Agency of Iceland commenced operations. More information. A pollution hazard at sea must be reported to the Icelandic Coast Guard, tel. 511-3333.

How do I report a pollution hazard in Iceland?

On January 1, 2025, the Icelandic Environment and Energy Agency and the Nature Conservation Agency of Iceland commenced operations. More information. A pollution hazard at sea must be reported to the Icelandic Coast Guard, tel. 511-3333. A pollution hazard on land must be reported to the police, tel. 112.

What is Iceland's emissions profile?

Iceland's emissions profile is in many ways unusual. Almost all heating and electricity generation is provided for by renewables - hydro and geothermal energy. Iceland has great potential for carbon uptake from the atmosphere by afforestation and revegetation, and to curb emissions from soils by reclaiming drained wetlands.

An Environmental Impact Assessment (EIA) of a geothermal project involves the comparison with other energy sources that may include fossil fuels, hydropower, nuclear power, other ...

The Icelandic government has commissioned three scientific assessments on the impacts of climate change on ...

Website: <https://angulate.co.za>

The outcome of the environmental assessment is used to decide whether to grant a permit for the project. If a permit is granted, the assessment results are used during the design and ...

Information on the main environmental aspects of the power plant and its effect on the respective energy source, including existing uses in the area, as appropriate. Information must be ...

The invention relates to a communication base station stand-by power supply system based on an activation-type cell and a wind-solar complementary power supply system.

The environmental impact is analysed, the significance of the effects assessed and mitigating measures proposed. A decision on whether to ...

An Environmental Impact Assessment (EIA) of a geothermal project involves the comparison with other energy sources that may include fossil fuels, ...

The Icelandic government has commissioned three scientific assessments on the impacts of climate change on nature and society. Impacts include receding glaciers, ...

What we do The Icelandic Ministry of the Environment, Energy and Climate formulates and enforces the Icelandic government ...

A case study was established to illustrate the methodology of mapping the solar and wind potential and their complementarity.

You can find information on ongoing cases, submit comments and feedback during the consultation period, and access final documents and decisions on Skipulagsgátt, the ...

The environmental impact is analysed, the significance of the effects assessed and mitigating measures proposed. A decision on whether to grant a permit for construction must be based ...

The Environment Agency of Iceland was dissolved on December 31, 2024. On January 1, 2025, the Icelandic Environment and Energy Agency and the Nature Conservation Agency of Iceland ...

What we do The Icelandic Ministry of the Environment, Energy and Climate formulates and enforces the Icelandic government policy for environmental affairs.
