What is a Megapack battery?

1 Reflects the average percentage of power available over the previous 12 months, weighted by GWh for projects that have contracted an Availability Guarantee and been in operation for over 30 days. 2 Compared to competitors. Megapack is a utility-scale battery that provides reliable energy storage, to stabilize the grid and prevents outages.

What is a Tesla Megapack?

The Tesla Megapack is a large-scale rechargeable lithium-ion battery stationary energy storage product, intended for use at battery storage power stations, manufactured by Tesla Energy, the energy subsidiary of Tesla, Inc. Launched in 2019, a Megapack can store up to 3.9 megawatt-hours (MWh) of electricity.

Will Tesla make a megapack with iron-based battery cells?

On the energy storage front, Tesla will now make its Megapack with iron-based battery cells. The Megapack is a three-megawatt-hour (MWh) battery that stores large amounts of electricity on the grid. Tesla's website advertises the Megapack as being applicable for "giga-scale projects" that can supply thousands of homes with electricity.

Is Tesla switching to lithium phosphate battery cells for Megapack energy storage?

Tesla is switching to lithium iron phosphate (LFP) battery cells for its utility-scale Megapack energy storage product, a move that analysts say could signal a broader shift for the energy storage industry.

Notably, 75% of Megapack 3's mass consists of battery cells, co-engineered with Tesla's cell team, utilizing a new 2.8-liter LFP battery format. The unit uses a souped-up ...

The Tesla Megapack is a large-scale rechargeable lithium-ion battery stationary energy storage product, intended for use at battery storage ...

Each Megapack uses 24 battery modules, electrical busing, and thermal management systems to ensure grid reliability and help to maximize energy density. The ...

On September 9, 2025, Tesla unveiled the next generation of its utility-scale battery systems -- the Megapack 3 and a new Megablock product -- designed to accelerate deployment, ...

When referring to the use of the highly sought after metal for Tesla's Model 3 electric vehicle battery, Elon Musk told CultureBanx last summer that, "we use less than 3% ...

Each Megapack uses 24 battery modules, electrical busing, and thermal management systems to ensure grid reliability and help to ...

On September 9, 2025, Tesla unveiled the next generation of its utility-scale battery systems -- the Megapack 3 and a new Megablock product -- ...

Tesla is switching to lithium iron phosphate (LFP) battery cells for its utility-scale Megapack energy storage product, a move that ...

Is Tesla's latest Megapack going to upend the future stability of sustainable cobalt supply on the continent?

The Tesla Megapack is a large-scale rechargeable lithium-ion battery stationary energy storage product, intended for use at battery storage power stations, manufactured by Tesla Energy, ...

Tesla doubled down on their bet on iron batteries in the ...

Tesla is switching to lithium iron phosphate (LFP) battery cells for its utility-scale Megapack energy storage product, a move that analysts say could signal a broader shift for ...

Canaccord Genuity analyst Jed Dorsheimer recently noted that Tesla has shifted to cobalt-free lithium iron phosphate (LFP) batteries for its flagship energy storage product, the ...

Megapack is a utility-scale battery that provides reliable energy storage, to stabilize the grid and prevents outages. Find out more about Megapack.

Tesla doubled down on their bet on iron batteries in the spring of 2021, announcing an intent to use LFP batteries in their grid-scale energy storage solution: the Megapack.
