Who owns Northern Lights?

Shell, Europe's largest energy company, is one of the owners of Northern Lights. "It's the first of what we expect many more projects to look like," said Mhairidh Evans, a vice president and global head of carbon capture research at Wood Mackenzie, an energy consulting firm.

Could Norway be a garbage disposal service for oil & natural gas?

Norway has long been Europe's leading producer of oil and natural gas. Now, with an eye to a future when earnings from those resources may decline, Oslo wants to parlay the skills of the petroleum industry and its favorable geology into a kind of garbage disposal service for emissions from heavy industry.

How much does it cost to build Northern Lights?

To encourage participation, the Norwegian government is putting up 22 billion kroner (\$2.2 billion), or about two-thirds of the 34 billion kroner it will cost to build the facilities for Northern Lights and its first 10 years of operations. Other governments, including Sweden's and the European Union's, are also contributing funds.

As Norway accelerates its transition to renewable energy, the SunContainer Innovations Energy Storage Power Station in Bergen stands as a critical infrastructure project.

With Longship, Norway is at the forefront of developing a technology that could be crucial in achieving the climate ...

No matter nights, rainy days or unexpected blackouts off the grid, the solar power is always at your request as a real bank. The built-in optimizer independently manages each battery module..

The Norwegian Minister of Energy officially opened the Northern Lights CO₂ transport and storage facility in Øy garden, near Bergen, Norway. The Northern Lights facility is ...

The Bergen Energy Storage Power Station represents Norway's next step in renewable leadership. As the project progresses, it underscores the growing global demand for smart ...

Major projects now deploy clusters of 20+ containers creating storage farms with 100+MWh capacity at costs below \$280/kWh. Technological advancements are dramatically improving ...

Summary: Bergen's push toward renewable energy integration makes containerized energy storage systems a game-changer. This article explores how modular battery solutions address ...

On the edge of a fjord on Norway's rocky west coast is a massive, almost sculptural structure that represents a multibillion-dollar bet on the economic future of energy in Northern ...

With Longship, Norway is at the forefront of developing a technology that could be crucial in achieving the climate goals. The Longship project is one of the first to develop an open access ...

Norway has over 25 years of experience with safe CO2 storage. Longship is a technological and political breakthrough that lays the foundation for a new green industry in ...

Norway's government subsidy for mobile solar containers has unlocked a surge in demand for portable renewable solutions. With 40% upfront cost coverage under the *EnergiX Fund* and ...

On the edge of a fjord on Norway's rocky west coast is a massive, almost sculptural structure that represents a multibillion-dollar ...
