To overcome the dependence on foreign imports and establish a robust domestic solar supply chain capable of supporting over 50GW of installations annually, the US must ...

The global photovoltaic (PV) module industry is undergoing transformative shifts, characterized by an unprecedented oversupply, evolving regulatory frameworks, and the need for stringent ...

New anti-dumping duties slammed on solar cells and modules from Cambodia, Malaysia, Thailand, and Vietnam threaten to leave vast production capacities stranded without ...

Overproduction at levels that far outweigh end demand is unsustainable for any industry, and from 2022 to 2024, the PV industry significantly overproduced, leading to major ...

The US and European Union are seeing solar panels pile up amid a massive oversupply, the IEA says. This has slashed prices by nearly half in 2023, and prices are set to ...

A massive, state-backed surge in global solar manufacturing capacity has created an unprecedented market oversupply, fundamentally reshaping the economics of the energy ...

The PV module supply chain is undergoing transformation in 2024, marked by oversupply, policy uncertainty, and low prices affecting manufacturing capacity expansion and ...

This oversupply means the cost of solar modules is hitting record lows, guaranteeing that clean power will be the cheapest source of new electricity for the ...

The world's solar manufacturing capacity is set to remain at more than double annual installations in the coming years, with the dynamics of oversupply continuing to depress panel prices, ...

Oversupply of solar cell modules
