What is a SDH network?

SDH networks and Synchronous Optical Networks (SONETs) -- often deployed by transmission network carriers -- are typically built to carry information between a utility control center and all remote sites. The information is used to manage capacity,monitor and control the system,bill customers,and enable staff communications.

How does a PTN/SDH network implement clock synchronization?

The PTN/SDH network can implement clock synchronization by accessing the clock source of the MS-OTN network,and then providing clock information for base stations to achieve synchronization. Frequency Synchronization
