Technological advancements are dramatically improving solar storage container performance while reducing costs. Next-generation thermal management systems maintain optimal ...

Two newly installed solar stations in Seychelles will allow for more accurate data to make weather forecasts with, the chief executive of the Seychelles Meteorological Authority ...

By deploying solar panels on the lagoon, the project avoids land-use pressures that typically constrain small island states, offering an innovative approach to expanding renewable ...

Solar-powered weather stations combine renewable energy with meteorological monitoring to create systems that offer advantages over traditional weather monitoring stations.

By deploying solar panels on the lagoon, the project avoids land-use pressures that typically constrain small island states, offering an ...

In a significant move to bolster sustainable development, the United Arab Emirates has committed to supporting Seychelles in enhancing its solar energy capacity and improving ...

Through its investments in solar and battery storage projects across multiple islands, SPS continues to play a pivotal role in supporting the nation's sustainability journey ...

By harnessing solar power, Seychelles is taking a proactive step toward a more sustainable and resilient energy future. The project is expected to save approximately 2 million ...

that offer advantages ...

In a landmark move for renewable energy in the Indian Ocean, Qair International has officially commenced construction on the first floating solar power plant in the Seychelles.

By mid-2025, Seychelles is poised to take a significant leap in renewable energy with the launch of its first floating solar farm--the largest in Africa.

Through its investments in solar and battery storage projects across multiple islands, SPS continues to play a pivotal role in supporting ...

As the first IPP utility-scale project in Seychelles and one of the largest floating solar PV projects in Africa, it represents a significant ...

By mid-2025, Seychelles is poised to take a significant leap in renewable energy with the launch of its first floating solar farm--the ...

By harnessing solar power, Seychelles is taking a proactive step toward a more sustainable and resilient energy future. The project is ...

As the first IPP utility-scale project in Seychelles and one of the largest floating solar PV projects in Africa, it represents a significant milestone for the region.
