NASA's real-time science encyclopedia of deep space exploration. Our scientists and far-ranging robots explore the wild frontiers of our solar system.

The solar system has eight main components: the Sun, eight planets, five dwarf planets, moons, asteroids, comets, the Kuiper Belt, ...

NASA Solar System Exploration Our Galactic Neighborhood Solar System Planets Moons Asteroids, Comets & Meteors

Our solar system includes the Sun, eight planets, five officially named dwarf planets, hundreds of moons, and thousands of asteroids and comets. Our solar system is ...

Our solar system consists of our star, the Sun, and everything bound to it by gravity - the planets Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, and Neptune; dwarf planets such as ...

Our solar system includes the Sun, eight planets, five officially named dwarf planets, hundreds of moons, and ...

Learn about the main solar components that make up a solar power system or solar panel kit: solar panels, inverters, racking, and batteries. Find out ...

So while Europa is only one-fourth the diameter of Earth, its ocean may contain twice as much water as Earth's global ocean. Europa's ocean is considered one of the most promising places ...

Our solar system's small bodies - asteroids, comets, and meteors - pack big surprises. These chunks of rock, ice, and metal are leftovers from the formation of our solar system 4.6 billion ...

Our solar system is a cosmic neighborhood centered around the Sun. It's home to eight planets, countless moons, asteroids, and comets. Understanding its components helps us grasp our ...

Our solar system extends much farther than the eight planets that orbit the Sun. The solar system also includes the Kuiper Belt that lies past Neptune's orbit. This is a sparsely occupied ring of ...

Juno's many instruments and engineering components appear on this model as two-dimensional images. If you would like to add three-dimensional detail to your model, see [Optional Finishing ...](#)
