I wrote the following code. When I try to run it as at the end of the file I get this stacktrace: `AttributeError: "super" object has no attribute do_something` class Parent: def ...

Learn about supercapacitors and their different applications and uses, including bridging the gap between electrolytic capacitors and ...

The one without super hard-codes its parent's method - thus is has restricted the behavior of its method, and subclasses cannot inject functionality in the call chain. The one ...

When you first hear the term "500farad super capacitor," it may sound as though some sci-fi flick is in the neighborhood, but fear not, ...

If we're using a class method, we don't have an instance to call super with. Fortunately for us, super works even with a type as the second argument. --- The type can be passed directly to ...

Supercapacitors are breakthrough energy storage and delivery devices that offer millions of times more capacitance than traditional capacitors. They deliver rapid, reliable bursts of power for ...

SUNVAULT ENERGY INC., in conjunction with the Edison Power Company ("Edison") has successfully created the world's largest 10,000 Farad Graphene Supercapacitor. This ...

I'm currently learning about class inheritance in my Java course and I don't understand when to use the `super()` call? Edit: I found this example of code where `super.variable` is used: `class A { ...`

That is why these capacitors, also known as ultracapacitors, are useful in many emerging technologies such as hybrid vehicles, active ...

Learn about supercapacitors and their different applications and uses, including bridging the gap between electrolytic capacitors and rechargeable batteries.

When you first hear the term "500farad super capacitor," it may sound as though some sci-fi flick is in the neighborhood, but fear not, for it is a very interesting and very ...

Novel electrolytes designed for lithium batteries, as well as solid-state electrochemical capacitors based on Nafion(TM), a proton-conduction polymer used in fuel cell technology, have not been ...

For a record, 10,000 Farad graphene supercapacitor created by Sunvault Energy and Edison Power Company is considered the most powerful supercapacitor to date. ...

In fact, multiple inheritance is the only case where super() is of any use. I would not recommend using it with classes using linear inheritance, where it's just useless overhead.

The term "supercapacitor" has become synonymous with electric double-layer carbon (EDLC) capacitors and similar high-energy storage devices and is loosely described as ...

"super" object has no attribute "__sklearn_tags__". This occurs when I invoke the fit method on the RandomizedSearchCV object. I suspect it could be related to compatibility ...
