super() is a special use of the super keyword where you call a parameterless parent constructor. In general, the super keyword can be used to call overridden methods, ...

super() lets you avoid referring to the base class explicitly, which can be nice. But the main advantage comes with multiple inheritance, where all sorts of fun stuff can happen.

The one without super hard-codes its parent"s method - thus is has restricted the behavior of its method, and subclasses cannot inject functionality in the call chain. The one ...
