I've read that `BASH_SOURCE` should be populated with the name of the executing script (and it works!). But why does `BASH_SOURCE` hold the name of the executing script, ...

I used to think that the built-ins `.` and `source` are equivalent. This question agrees with me when it comes to bash. However I encountered the following using zsh: desktop `~/.pst` `env /usr/bin/e...`

You have an alias which is overriding the builtin `source` (fix with `unalias source`) You have a function which is overriding `source` (fix with `unset -f source`) You are somehow not using bash ...

Let's explore how solar energy is reshaping the way we power our communication networks and how it can make these stations greener, smarter, and more self-sufficient.

What is the difference between sourcing ("`.`" or "`source`") and executing a file in bash? Ask Question Asked 13 years, 5 months ago Modified 4 years, 10 months ago

Solar containers provide a complete package of power generation with military-grade robust protection. They are not just solar ...

Discover the TCOM Solar Communication Tower: a reliable, off-grid solution for seamless connectivity in remote locations. Powered by renewable energy, it's efficient, sustainable, and ...

These self-contained units offer plug-and-play solar solutions for remote locations, emergency power needs, and grid supplementation. This comprehensive guide examines their ...

`2` `source` is there for readability and self-documentation, `.` exists because it is quick to type. The commands are
