-----

I am trying to use transaction blocks on a SQL-Console with an Oracle DB. I'm used to use transaction blocks in PostgreSQL like BEGIN; &lt;simple sql statement&gt; END; but in ...

Probably you're also using Spring Data. Calls on Spring Data repositories are by default surrounded by a transaction, even without @EnableTransactionManagement. If Spring ...

There is an Update query in progress, the Transaction is started at a higher level on the connection. In order to ensure that all server data is in a valid state for the Update, I need to ...

The good news is a transaction in SQL Server can span multiple batches (each exec is treated as a separate batch.) You can wrap your EXEC statements in a BEGIN ...

Add a try/catch block, if the transaction succeeds it will commit the changes, if the transaction fails the transaction is rolled back:

A transaction is a unit of work that you want to treat as &quot;a whole.&quot; It has to either happen in full or not at all. A classical example is transferring money from one bank account to ...

As long as you don't COMMIT or ROLLBACK a transaction, it's still &quot;running&quot; and potentially holding locks. If your client (application or user) closes the connection to the ...

Additionally, you should read from tbl\_supplier after the transaction has been committed by executing a SqlDataReader. I'm assuming you just wanted to know how many ...

A distributed transaction is a transaction on a distributed database (i.e., one where the data is stored on a number of physically separate systems). It's noteworthy because there's a fair ...

Do u think there is a better way to write a transaction in t-sql? Is there a better approach that improves maintainability and performance of the application that uses this ...
