From deep tech to offshore wind, this series showcases how Enterprise Singapore is charting the development of new industries to power our enterprises and economy's growth.

The development of the ASEAN Power Grid and regional energy trading mechanisms could allow Singapore to benefit from wind energy generated in locations with ...

The Global Wind Atlas is a free, web-based application developed to help policymakers, planners, and investors identify high-wind areas for wind ...

Explore how innovative wind turbine technologies are being adapted for Singapore's unique urban environment, from high-rise installations to offshore wind farms.

As part of our efforts to continually explore new options for energy supply and enhance our energy security, Singapore is exploring a variety of different ...

Singapore's relatively narrow tidal range and calm seas limit opportunities for commercial tidal power generation. Much of our sea space is also used for ports, anchorage and shipping ...

As part of our efforts to continually explore new options for energy supply and enhance our energy security, Singapore is exploring a variety of different options, including regional power grids, ...

Vertical-axis wind turbines are a viable solution for dense urban areas, as well as rooftops with limited space and public safety concerns. Such wind turbines would still not experience ideal ...

The Global Wind Atlas is a free, web-based application developed to help policymakers, planners, and
