What does a battery group size mean?

The numbers and letters in a battery group size represent the physical dimensions and terminal placement of the battery. They ensure it's compatible with your vehicle's make and model. How do I know if a battery will fit my vehicle based on the size chart?

What does a battery code mean?

Battery codes combine letters and numbers representing chemistry, dimensions, and performance. The first letter (s) denote chemistry (e.g., "L" for alkaline, "CR" for lithium). Numbers often indicate size: the first two digits represent diameter in millimeters, followed by height in tenths of a millimeter.

What does CCA mean on a car battery?

Cold Cranking Amps (CCA) Cold Cranking Amps (CCA) is a crucial rating for determining a battery's ability to start your car in cold weather. CCA measures how many amps the battery can deliver for 30 seconds at 0°F (-18°C) while maintaining a voltage of at least 7.2 volts.

What is a BR2032 battery code?

Safety-critical devices like smoke detectors require specific codes like "BR2032" (3V lithium with brass contacts) instead of standard CR2032 cells. Always verify the fifth character in codes - for example, the "L" in "PL2032" indicates premium lithium with extended temperature tolerance, crucial for outdoor equipment.
