## How does 5G work?

5G networks divide coverage areas into smaller zones called cells, enabling devices to connect to local base stations via radio. Each station connects to the broader telephone network and the Internet through high-speed optical fiber or wireless backhaul.

## Who makes 5G radio & core systems?

Major suppliers of 5G radio and core systems included Altiosstar, Cisco Systems, Datang Telecom/Fiberhome, Ericsson, Huawei, Nokia, Qualcomm, Samsung, and ZTE. Huawei was estimated to hold about 70 percent of global 5G base stations by 2023.

## What is the marketing of non-5G services?

The marketing of non-5G services refers to the promotion of enhanced 4G networks that are presented as precursors or equivalents to 5G. Some mobile network operators marketed upgraded 4G technologies using terms that suggested 5G capability.

## What is a 5G core?

The 5G core (5GC) is a service-oriented, software-defined system that separates control and user planes and supports flexible deployment. It replaces the 4G Evolved Packet Core with modular, software-based network functions.

Following the necessary approval from the Malawi Communications Regulatory Authority (MACRA), the operator has ...

Following the necessary approval from the Malawi Communications Regulatory Authority (MACRA), the operator has successfully activated 5G base stations in two prominent ...
