How does 5G work?

5G networks divide coverage areas into smaller zones called cells, enabling devices to connect to local base stations via radio. Each station connects to the broader telephone network and the Internet through high-speed optical fiber or wireless backhaul.

What is 5G New Radio (NR)?

The 5G New Radio (NR) interface defines two main operating ranges: Frequency Range 1 (FR1) - below 7.125 GHz, also called sub-6 GHz. It covers low- and mid-band frequencies and supports channel bandwidths up to 100 MHz. Typical download speeds range from 5 to 900 Mbit/s depending on conditions.

Which is the first 5G phone from China?

The world's first phone capable of using 5G connectivity, the Chinese ZTE Gigabit Phone, was unveiled at the Mobile World Congress (MWC) on Feb 28, 2017. China's ZTE completed the functionality test of 5G standalone architecture in Sep 2018. China's three major state telecom operators rolled out 5G nationwide coverage (50 cities) on Nov 1, 2019.

What is the marketing of non-5G services?

The marketing of non-5G services refers to the promotion of enhanced 4G networks that are presented as precursors or equivalents to 5G. Some mobile network operators marketed upgraded 4G technologies using terms that suggested 5G capability.

These data can be visualized by applying filters by technology (no coverage, 2G, 3G, 4G, 4G+, 5G) over a configurable period (only the last 2 months for example). It's a great tool to track ...

Use the interactive map below to select a country and view available mobile network operators (MNOs), along with their coverage areas. GSMA Intelligence collects and verifies mobile ...
