Could Chinese solar power inverters destabilise power grids?

Solar panels are seen with a view of the neighbourhood and lower Manhattan in New York in this August 2022 file pic by Reuters. Western nations have raised a security alert after US experts found "rogue communication devices" in Chinese solar power inverters, amid concern they could be used to destabilise power grids.

Why are solar power inverters being disabled from China?

In November, a commercial dispute between two inverter suppliers - Sol-Ark and Deye - led to solar power inverters in the US and elsewhere being disabled from China, highlighting the risk of foreign influence over local electricity supplies and causing concern among government officials, three people familiar with the matter said.

Are Chinese-made solar inverters a security risk?

U.S. energy officials are reportedly reassessing the security risks posed by Chinese-made components in renewable energy infrastructure after discovering hidden communication devices inside certain solar inverters.

Are Chinese solar inverters Rogue?

U.S. experts have allegedly found rogue communication devices, including cellular radios, in Chinese-made solar inverters and batteries over the past nine months. These undocumented devices create additional communication channels that could bypass firewalls remotely, posing significant security risks.

Since we can say "Why can we grow taller?", "Why cannot we grow taller?" is a logical and properly written negative. We don't say "Why we can grow taller?" so the construct ...

Using the rogue communication devices to skirt firewalls and switch off inverters remotely, or change their
